

Air Bearing Turntable Control Unit

Introduction

The unit is designed for use with any equipment requiring a smoothed and regulated voltage of up to 6V dc at currents of up to 1A. The low voltage output is protected against overload or short circuit by an electronic regulator.

Output

The output voltage is smoothed and regulated and is continuously variable over the range 1.5V - 6V d.c. Maximum current is 1A.

The output is taken from two 4mm sockets colour coded red (positive) and black (negative).
